

FOOD PROCESSING SOFTWARE

# Beef Processing

Emydex Production Management Software modules cover all stages of the Beef production process, from procurement, animal reception (lairage) and kill line, through to the boning hall, packing and dispatch. Whether your business is an abattoir, cutting plant, retail packing plant or all of the above, our software can be easily adapted to match your exact business requirements, delivering a factory floor system that tightly fits your business.

Emydex are the market leading supplier of factory floor software systems to Beef processors in Ireland. We also supply our software systems to market leading Beef processors in the UK, Europe, Southern Africa and Australasia.

The Emydex Beef processing system caters for both single-plant and multi-plant operations and is currently operating in over 40 Beef processing plants around the world.

*"What's different about Emydex is you're working with people who understand the demands of the food industry very well. Sometimes end users don't always know what they want, Emydex have the ability to visualise an idea, without knowing the final solution, and see it through to completion".*

Jim O'Neill - Group IT Manager - Kepak Group

## Beef processing system features include:

- ▶ Kill Plan & Appointments (eProcurement)

# FACTORY FLOOR SOFTWARE FOR FOOD PROCESSORS

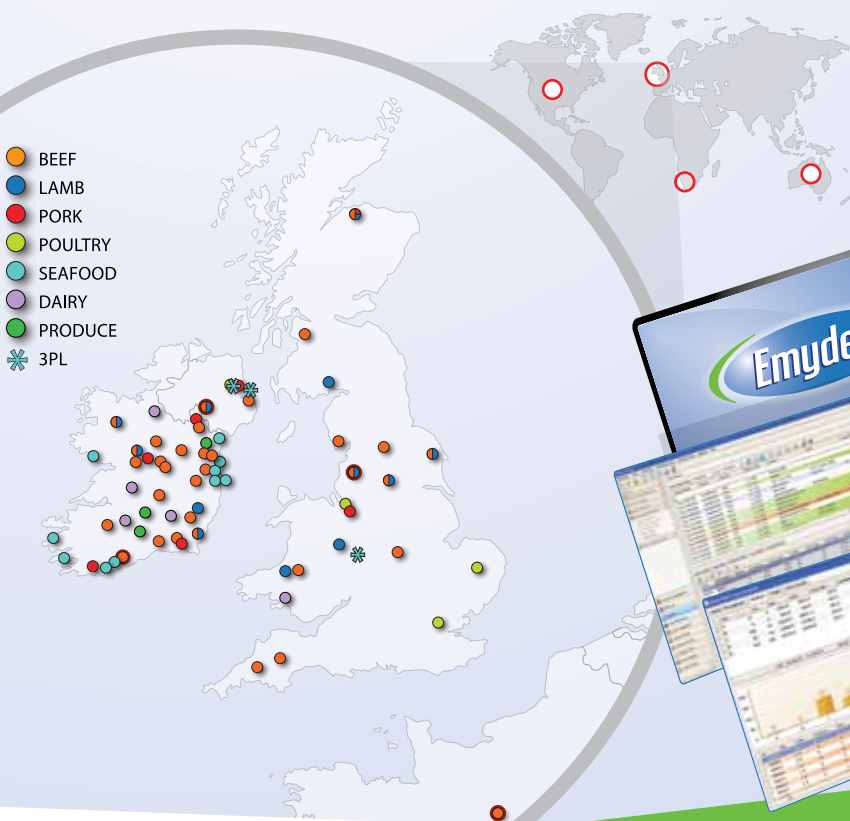

## Customisable Food Processing Software Solutions

Emydex specialise in the design, development and implementation of factory floor software systems for the Food Industry.

Using our software, food processors can monitor, control and report on all stages of their production processes, gaining full traceability of food produced from door to door.

Emydex software is modular in design so food processors large and small have the option to roll-out our modules on a piecemeal basis meaning less risk, time and cost.

## Global Customer Network

How we differ from other software providers:

### Hardware Flexibility

Emydex software will run on any compatible hardware device offering customers the flexibility to reuse existing hardware or shop around for the best options.

### Software Flexibility

Our open technology platform allows ease of integration to any 3rd party or in-house software systems such as financials, ERP or 3rd party cold stores.

### Flexibility to Customise

Emydex software can be customised to suit any existing work practices so customers never have to change their existing business processes to suit the system.
