

FOOD PROCESSING SOFTWARE

Fresh Produce

Emydex was originally designed to handle the complexities of meat processing that is a disassembly production process involving dual units of measure, variable weighted products, as well as a requirement to interface to factory floor machinery such as scales, label printers and industrial machinery.

Despite being designed for meat processing, Emydex is also ideally suited to handle the relatively more straightforward food processing industries such as Fresh Produce, Fruit and Vegetables.

Similar to Meat, Fish and Food products, Fresh Fruit and Vegetables are perishable products with a short shelf life. They are also inconsistent in their form, and can be sold as either fixed or variable weight finished goods, whether in bulk, bags, packs, boxes or pallets.

So whether its fruit or vegetables such as strawberries, mushrooms, broccoli, potatoes or carrots, the Emydex software platform has been designed to capture production data from factory door to door, delivering plant managers real-time accurate reporting on production, stocks, quality and traceability.

Fresh Produce system features include:

- ▶ Purchase Order Processing
- ▶ Supplier Intake
- ▶ Raw Material, Dry Goods, Ingredients & Packaging Stock Control
- ▶ Production Planning & Forecasting
- ▶ Into-Production
- ▶ OCM / Box Packing (Weigh Labelling)
- ▶ Bulk & Retail Packing & Labelling
- ▶ Recipe Formulation
- ▶ Yields, Giveaway & Efficiency Reporting
- ▶ Daily Production Reporting
- ▶ Forwards & Backwards Traceability Reporting
- ▶ Quality & Compliance Management
- ▶ Warehousing & Stock Management
- ▶ Finished Product Stock Control
- ▶ Stock Reporting, Age, Location & Value
- ▶ Sales Order Picking & Dispatch
- ▶ Container Loading & Shipments
- ▶ 3rd Party ERP System Integration
- ▶ 3rd Party Cold Store Integration

FACTORY FLOOR SOFTWARE FOR FOOD PROCESSORS

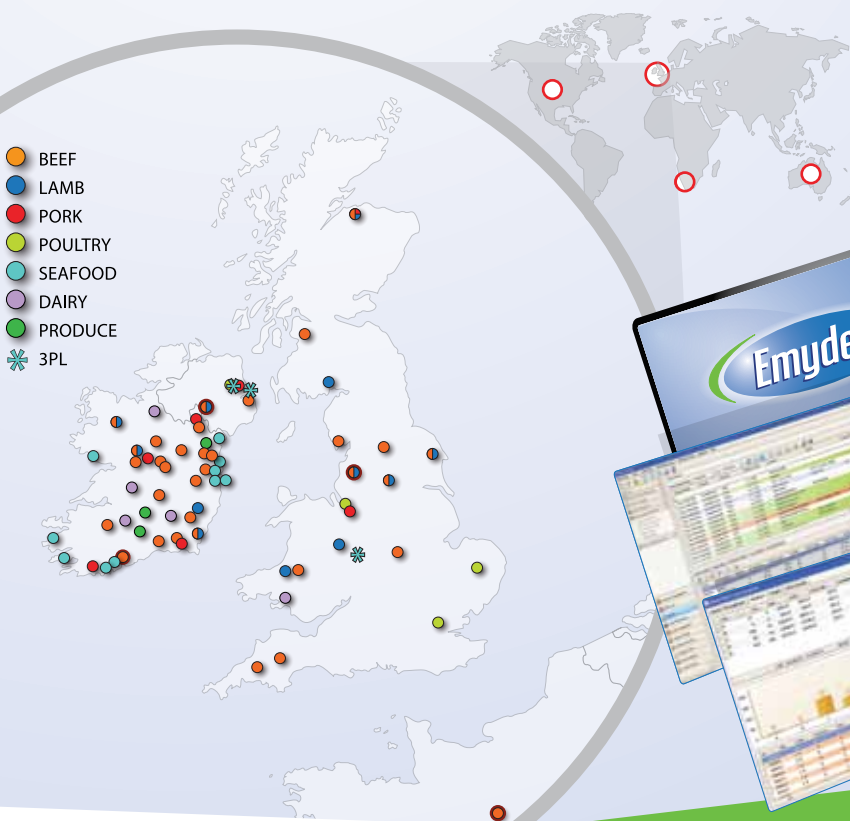

Customisable Food Processing Software Solutions

Emydex specialise in the design, development and implementation of factory floor software systems for the Food Industry.

Using our software, food processors can monitor, control and report on all stages of their production processes, gaining full traceability of food produced from door to door.

Emydex software is modular in design so food processors large and small have the option to roll-out our modules on a piecemeal basis meaning less risk, time and cost.

Global Customer Network

How we differ from other software providers:

Hardware Flexibility

Emydex software will run on any compatible hardware device offering customers the flexibility to reuse existing hardware or shop around for the best options.

Software Flexibility

Our open technology platform allows ease of integration to any 3rd party or in-house software systems such as financials, ERP or 3rd party cold stores.

Flexibility to Customise

Emydex software can be customised to suit any existing work practices so customers never have to change their existing business processes to suit the system.
