

FOOD PROCESSING SOFTWARE

# Lamb Processing

Emydex offer a complete solution for all stages of the Lamb processing industry, whether you are an abattoir, cutting plant or retail packing plant. Emydex offers real-time online links to relevant Government agencies, electronic ear tag reading (EID), high speed weighing and grading, and country of origin labelling.

Emydex is currently operating in over 20 Lamb processing plants and is the market leading supplier of factory floor software systems to Lamb processors in Ireland and the UK. Our Lamb processing clients include 2 of the Top 3 Lamb processors in Ireland, the largest Lamb processor in the UK, as well as numerous market leading Value-Added and Cooked Meats Lamb processors.

*"Emydex is a central pillar of our strategic IT plan going forward, and our goal now is to concentrate on completing the roll-out of Emydex to our primary processing sites by year end. This plan may seem aggressive, but we believe it's achievable on account of the inherent flexibility of the core Emydex product to handle any differences in the business processes required in each of our fourteen disparate sites"*

Shane Slattery - Group IT Manager, Dawn Meats Group

## Lamb processing system features include:

- ▶ Kill Plan & Appointments (eProcurement)

# FACTORY FLOOR SOFTWARE FOR FOOD PROCESSORS

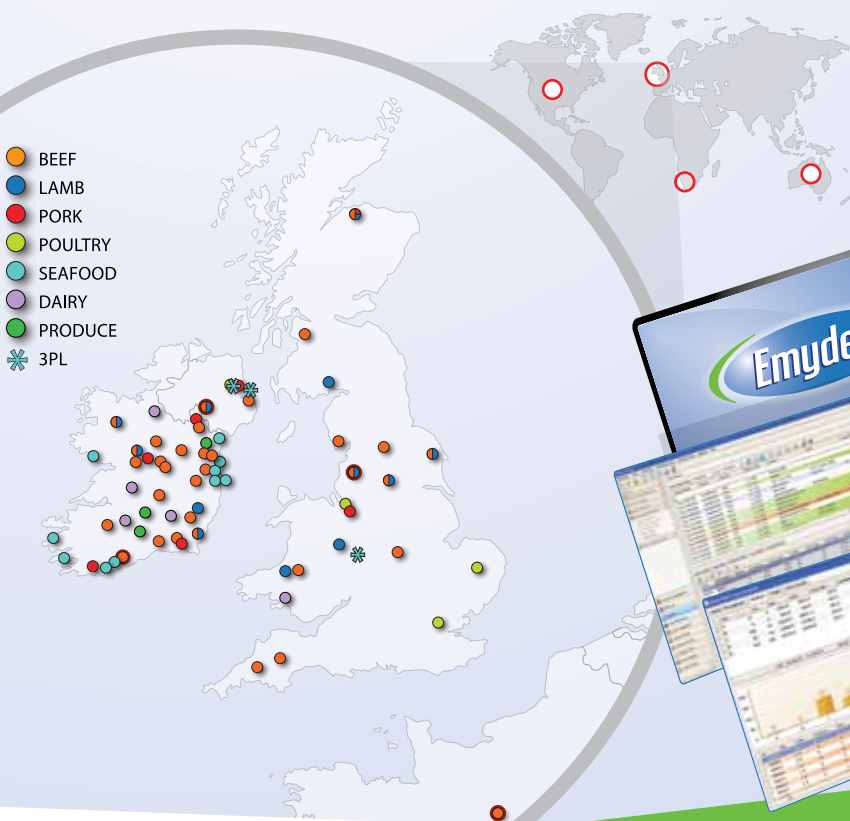

## Customisable Food Processing Software Solutions

Emydex specialise in the design, development and implementation of factory floor software systems for the Food Industry.

Using our software, food processors can monitor, control and report on all stages of their production processes, gaining full traceability of food produced from door to door.

Emydex software is modular in design so food processors large and small have the option to roll-out our modules on a piecemeal basis meaning less risk, time and cost.

## Global Customer Network

How we differ from other software providers:

### Hardware Flexibility

Emydex software will run on any compatible hardware device offering customers the flexibility to reuse existing hardware or shop around for the best options.

### Software Flexibility

Our open technology platform allows ease of integration to any 3rd party or in-house software systems such as financials, ERP or 3rd party cold stores.

### Flexibility to Customise

Emydex software can be customised to suit any existing work practices so customers never have to change their existing business processes to suit the system.
